Harvard Medical School
Slicer in Operating Room

3D Slicer’s data I/O in OR
- Import images from MRI/CT/Ultrasound..
- Import tool tracking data
- Send commands to robotic devices
- …
OpenIGTLink

• TCP/IP network communication
  • NDI 3D tracking systems
  • Research software
    • PLUS (Queen’s), CISST library (JHU), IGSTK (Kitware), Matlab/Octave, etc

• Why TCP-based network?
  • Available in modern operating rooms
  • Affordable devices (interfaces, switchers and cables)
  • Flexible network topologies
  • Wireless capability (IEEE 802.11a/b/g/n)
  • Reasonable performance (i.e. bandwidth, latency)
3D Slicer OpenIGTLink IF

- Import data from remote host MRML scene
- Export data from MRML scene to remote host
TCP Connection Basics (1)

Remote host is specified by

- IP address (i.e. 192.168.0.1) or network address (i.e. watson.bwh.harvard.edu)
- Port number (i.e. 18944)
TCP Connection Basics (2)

“Server” and “Client”
• The server waits for the client at given port.
• The client requests for a connection to the server.
• Server (client) is not necessarily a sender (receiver).
• Slicer can be either server or client

Connection request

Data transfer
This course requires the following installation:

- 3DSlicer version 4.1 Software (Slicer 4.1.0 21127 or newer) available from:

  [http://download.slicer.org/](http://download.slicer.org/)

- Volume Reslice Module for 3D Slicer (available as Slicer Extension; installation of this Slicer Extension is part of this tutorial)

- Tracker Simulator:

**Disclaimer**

It is the responsibility of the user of 3DSlicer to comply with both the terms of the license and with the applicable laws, regulations and rules.
Learning objective

Following this tutorial, you’ll be able to import tracking data from external devices (e.g. tracking system) through the network.
Overview

- Installation of Volume Reslice Driver
- Configuring OpenIGTLink IF module
- Setting up Test Server
- Visualizing Tracking Data
The Graphical User Interface (GUI) of Slicer3 integrates five components:

• the Menu Toolbar
• the Module GUI Panel
• the 3D Viewer
• the Slice Viewer
• the Slice and 3D View Controller
Part 1: Installing Volume Reslice Driver Module
Open Extension Manager

Select Extension Manager
Open Extension Manager

Select “IGT”

Click INSTALL
Restart 3D Slicer

Click “Restart”
Part 2: Configuring OpenIGTLinkIF module
Start OpenIGTLinkIF

Select OpenIGTLinkIF
Add Connector

To connect 3D Slicer to external device/software using OpenIIGTLink IF, a “connector” has to be created for each connection.

Connectors can be configured in “Connectors” Tab in OpenIIGTLink IF module.
Add Connector

Click “+” button

“vtkMRMLIGTLCconnectorNode1” shows up on the list
You may change the name of the connector by type in a new name and hit Return key.

This is an optional step. It is a good idea to name connectors, especially if you have multiple connections.
Set Connector Type

Check “Client”

Type and hostname appears on the list
Part 3: Setting up TrackerServer
Extract Server Program

Uncompress the archived simulator files downloaded from the simulator page. Find TrackerServer binary file.
Open Terminal

Open a terminal window.

Windows: Open the start menu, type “cmd” in the search box area and then press Enter key.

Mac: Open “Utilities” in “Application” folder and double-click the “Terminal.app” icon.

Linux: Open terminal window.
Start TrackerServer (1)

Windows/Mac: Drag “TrackerServer” icon from Explorer (Win) or Finder (Mac) and drop into the command window.

Linux: Type the path to the binary file of “TrackerServer”.

1. Drag
2. Drop
Specify port number (18944) and frame rate (10 frames/second) in the terminal window. Once the return key is pressed, the TrackerServer starts waiting for a client.
Connect to Test Server

1. Click “Active” to connect
2. Status becomes “ON”
3. Simulator starts printing random transform matrix values in the terminal window.
Check Transform

Open “Transforms”

Choose “Tracker”

Transform is being updated while Tracker Simulator is sending data.
Part 4: Visualizing Tracking Data
Load Sample MRI Data

Open “Welcome to Slicer”

Click “Download Sample Data”
Load Sample MRI Data

Click “Download MRHead”

Status window shows the progress

Sample image appears in the slice viewer
Choose Locator Source

1. Click “+” at “IGTLConnector” in the I/O configuration to expand the IO tree.

2. Click “+” at “IN”.

National Alliance for Medical Image Computing

NA-MIC© 2010-2012
Enable Locator

Click the eye icon in the I/O configuration tree.

The icon changes to
Locator model appears in 3D Viewer
Open Volume Reslice Driver

Tokuda, J
National Alliance for Medical Image Computing
NA-MIC© 2010-2012
Choose Driver Transform

Click “Driver” menu and choose “Tracker”
Click "eye" icon to show the slice in the 3D viewer
Update Slice Orientation

Click “Position and Orientation”

The slice starts changing its orientation
Configure Other Drivers

Volume Reslice Module can drive up to 3 slices independently
