3D Data Loading and Visualization

Sonia Pujol, Ph.D.

Surgical Planning Laboratory
Harvard University
Slicer is a freely available open-source platform for segmentation, registration and 3D visualization of medical imaging data.

3DSlicer is a multi-institutional effort supported by the National Institute of Health.
Translational research

An open-source environment for software developers

An end-user application for clinical investigators and scientists

3D Slicer: an open-source platform for translating innovative algorithms into clinical research applications
3DSlicer History

• 1997: Slicer started as a research project between the Surgical Planning Lab (Harvard) and the CSAIL (MIT)

Image Courtesy of the CSAIL, MIT
3DSlicer History

• 1997: Slicer started as a research project between the Surgical Planning Lab (Harvard) and the CSAIL (MIT)

• 2016: Multi-institution effort to share the latest advances in image analysis with clinicians and scientists
A Multi-institution Effort

- Infrastructure grants fund the platform
- Collaborative projects (e.g. Canada, Japan, Australia, Italy) fund the application packages
Slicer Is Open

- Open Science = Open Source + Open Data + Open Community

Madrid 2012

Courtesy R. Kikinis
Slicer Open Community

- 80 authorized developers contributing to the source code of Slicer
- Over 700 subscribers on Slicer user and Slicer developer mailing list
3D Slicer in practice

- Slicer is open-source
- Slicer works on Windows, Linux, and Mac
- Slicer is distributed under a BSD-style license agreement with no restriction on use
Slicer: Behind the scenes

Slicer is built every night on Windows, Mac and Linux platforms.
Slicer Training

- Hands-on training workshops at national and international venues
- >2,300 clinicians, clinical researchers and scientists trained since 2005
3D Visualization of the Anatomy

Following this tutorial, you will be able to load and visualize volumes within Slicer4, and to interact in 3D with structural images and models of the anatomy.
The **Welcome** module is the default start-up module.
Each module of Slicer includes a series of tabs, which gives access to different functionalities.

Click on the arrow symbol to display the content of each tab.
The Main Window tab contains information on the basic organization of Slicer’s user interface.

Scroll down to see all the contents.

SlicerWelcome Tutorial
Browse to the location of the MR dataset **MR-head.nrrd** on your disk.

Drag and drop it into Slicer

Slicer automatically opens the ‘Add data into the scene’ window.

Click on **OK** to load the dataset into Slicer.
Loading a volume

The axial, sagittal and coronal views appear in the 2D viewers.
Loading a volume

Click on the Slicer layout icon
Loading a volume

Click on the Red slice only option
Position your mouse over the **pin icon** to display the slice viewer toolbar.
Once the slice viewer toolbar is displayed, click on the “>>"
Loading a volume

This menu will appear once the “>>>” button is pressed
Loading a volume

Click on the Lightbox menu and choose the option "6x6 view"
Slicer displays 36 consecutive images of the dicom volume. Use the red slice slider to browse through the data.

See more at http://goo.gl/6BvcHm.
Loading a volume

Welcome

Click on the **Slicer layout icon** and select **Conventional**
Loading a volume

Position your arrow again on the **pin icon** of the red viewer, select the **Lightbox** menu and change it back to "**1x1 view**"
Loading a volume

Position your arrow again on the **pin icon** of the red viewer and click on the links icon to link all three viewers.
Once the icons are linked, click on the **eye icon** to display all 3 anatomical slices in the 3D viewer.
All three anatomical slices are shown in the 3D viewer.
Loading a volume

Use the left mouse button to rotate the camera and the right mouse button to zoom in and out.
Close the scene

To close the scene, click on File and select Close Scene
To exit Slicer, click on Slicer and select Exit.
Part 2:

3D visualization of surface models of the brain
Loading a Scene

Drag and drop the file ‘3DHeadScene.mrml’ into Slicer
Loading a Scene

Slicer automatically opens the ‘Add data into the scene’ window.

Click on OK to load the scene file.
A 3D surface model of the head, and 2D anatomical slices appear in the Slicer Viewer.
Loading the Slicer Scene

Select the **Modules** menu and select **Models**.
The list of 3D scenes appear in the Models panel.
Position the cursor over the **pin icon** to reveal the slice menu and click on the **eye icon** to reveal the axial slice.
3D Visualization

Notice the axial slice through the 3D model of the head

Once the axial slice is displayed in the 3D viewer, click on **Skin** in the list of 3D scenes.
Scroll down the **Models** tabs and locate the "**Color**" tab. Lower the **Opacity** to a transparent level, around .30.
Notice the skin has become almost fully transparent.
Scroll back up to the 3D scenes menu and select **skull_bone**
Turn off its visibility by unchecking the **Visibility** option and notice the bone disappearing from the 3D view of the head.
Position your mouse over the **pin icon** in the coronal slice view and select the **eye icon** to reveal the coronal slice in the 3D view.
The coronal slice is shown in the 3D viewer.
Scroll up and select the 3D scene `hemispheric_white_matter`, then check off the option for **Clip** under the **Visibility** tab.
Scroll down and find the tab **Clipping**, and check off the options for **Green Slice Clipping** and **Negative Space**
3D Visualization

The optic chiasm appears in the 3D viewer.
3D Visualization

Scroll up and uncheck the option for **Clip** and lower the **Opacity** of **hemispheric_white_matter**.
The intersection of the white matter surface with the 2D anatomical slices are shown in the 2D viewers.
3D Visualization

Position your cursor over the **pin icon** in the corona slice view and unselect the **eye icon**.
Click on the Slicer Layout icon and select Conventional
Position your cursor over the pin icon in the 3D viewer to display the 3D control windows. Select the A (Anterior) view of the 3D models.
Part 3:

Saving a scene
Saving a Scene

Click on **File** and select **Save**
Saving a Scene

The **Save Scene and Unsaved Data** window lists all the elements of the slicer scene.
Saving a Scene

Check off the box next to the scene named 3DHeadScene.mrml and double click on it. Rename it myNewScene.mrml and select Save.
Click on **File** and select **Quit** to close **myNewScene.mrml** and exit Slicer.
Scene Restore

Restart Slicer and click on **Load Data**
Scene Restore

Click **Choose File(s) to Add** and browse your folders to find the file **myNewScene.mrml** in the **3DHeadData** folder.
Scene Restore

Click OK
The 3D scene myNewScene.mrml appears in the viewer.
